Pylara Wind Farm
Project Update

Project update

Iberdrola Australia is continuing early-stage feasibility investigations for the proposed Pylara Wind Farm, located west of Tarago, NSW in the Woodlawn Eco-Precinct site, within the Pejar Local Aboriginal Land Council boundary, and the Goulburn Mulwaree and Queanbeyan-Palerang local government areas. Early ecology and biodiversity studies have commenced, with a meteorological (met) mast planned for installation in the coming months to collect wind data and support project investigations.

Community and neighbour engagement remains a key focus for our team. In the coming months, members of the project team, including Chris and Adam, will be reaching out to neighbours closest to the project area to introduce themselves, answer questions and hear local feedback. Nearby residents will receive a letter inviting them to arrange a time to meet with the team and discuss the project. To reach Chris directly to book an appointment, please call or text 0448 293 899.

Community grants

Earlier this year we launched our first community grants round for the Pylara Wind Farm Project. We received a number of applications from a variety of community groups to improve community infrastructure and fund community initiatives. We're pleased to announce the following successful grant recipients:

- **Tarago Riding Club** replacement of arena surface: Funding will go towards the upgrade of the horse arena surface, including removal of the existing surface and edging, installation of a new high-quality surface designed to improve safety, and replacement of the arena perimeter with durable new edging.
- **Tarago Preschool** electronic gate upgrade: Funding will assist with the replacement of the preschool's electronic gate system, improving safety, security and reliability for children, families and staff.
- **Pejar Local Aboriginal Land Council** community family day and birthday celebration: Funding will support an Aboriginal community family day in November and a community birthday celebration dinner in December, providing opportunities for cultural connection, community participation and celebration.
- **Bungendore Show:** Iberdrola Australia is working alongside our operational wind farms, Capital Wind Farm and Woodlawn Wind Farm, to jointly sponsor the Bungendore Show and support this long-standing community event that brings together residents, local businesses and community groups from across the region.

Indicative Project Timeline

Ongoing Community & Stakeholder Engagement

Project Feasibility & Initial Community Engagement
- Undertaking initial technical studies and investigations at the proposed site
- A focus on community engagement, with a series of one-on-one meetings, briefings and public information drop-in sessions

We are here

Scoping Report Submission
- Preliminary social, environmental and technical studies
- Department issues project specific Secretary's Environmental Assessment Requirements (SEARs)

Environmental Impact Assessment (EIS) & Detailed Studies
- Refinement of plans and preparation of assessments and studies
- Lodgement of Development Application (DA) to the NSW Department of Planning, Housing and Infrastructure (DPHI) supported by the EIS including a Social Impact Assessment

Public Exhibition & Response to Submissions
- Iberdrola Australia's DA is displayed for formal public feedback
- Preparation of a submissions report that explains how submissions have been addressed in the DA process

Development Approval Determination
- DPHI assesses the project
- Consent authority decides whether to grant (including conditions of consent) or refuse consent
- Determination of the DA will be communicated

Pre-construction (contracting and procurement)
- Social procurement and engaging local suppliers
- Negotiating construction and equipment supply contracts

Construction & Commissioning
- If approved, construction takes place and the project is commissioned

Wind Farm Operations
- Iberdrola Australia operates the wind farm

Wind Farm Decommissioning & Potential Repowering

Next steps

Further community information drop-in sessions planned for the first half of 2027

Ongoing First Nations, community and stakeholder consultation

Installation of a meteorological (met) mast in the coming months to support wind monitoring activities

Ongoing ecology, biodiversity, social and technical studies to further understand project impacts and constraints

Preliminary grid connection and assessment studies

Preliminary project design informed by community feedback and environmental constraints
